

SUMMARY

Computer Science graduate with a strong foundation in algorithms, object-oriented programming, full-stack development using Java and React. Experienced in building end-to-end applications, integrating APIs, and optimizing system performance. Thrives in collaborative, fast-paced environments and passionate about solving complex problems to create scalable, user-centric solutions

EDUCATION

ILLINOIS INSTITUTE OF TECHNOLOGY

Master of Science, Computer Science

Chicago, Illinois, USA

May 2025

Coursework: Advanced Database Organization, Mobile Development Application, Cloud Computing, Computer Networks
Introduction to Information Security, Big Data Technologies, Software Management, Parallel & Distributed Systems

JAIN UNIVERSITY

Bachelor of Technology, Information Science & Engineering

Bangalore, India

July 2022

Coursework: Software Engineering, Data Structures, Object-Oriented Programming and Design, Programming with Python, Automation Theory and Logic, Design & Analysis of Algorithms, Object-Oriented Design, Software Testing

SKILLS

Programming Languages – Python, Java, C, C++, R, Dart

Cloud & DevOps – AWS, GCP, Docker, Kubernetes, Kafka, CI/CD, Version Control, Cloud Computing

Databases & Data Science – MySQL, MongoDB, NoSQL, Pandas, NumPy, scikit-learn, Matplotlib, Seaborn, TensorFlow, OpenAI, ML Algorithms

Web & App Development – HTML, CSS, JavaScript, React, Flutter, RESTful APIs, Agile/Scrum

Tools & IDEs – IntelliJ IDEA, Eclipse, VS Code, Git, GitHub, Bash, Linux, MS Office, Tableau

EXPERIENCE

CONCENTRIX

Technical Engineer

Bangalore, India

February 2023 – August 2023

- Integrated **Braintree** and **Adyen** using **Java** and **REST APIs** to support real-time charge and subscription tracking, reducing support wait times by **25%** and contributing to over **\$108K** in annual revenue retention
- Built intelligent routing logic for **Adobe OAC** leveraging **Java**, **AWS Lambda**, **API Gateway**, and **DynamoDB**, which improved agent connectivity by **33%** and accelerated customer response flows
- Engineered scalable backend data pipelines for **Hendrix** using **Java**, **SQL**, **Docker**, **Jenkins**, and **GitLab**, reducing data latency by **40%** and enabling real-time analytics access for internal customer-facing teams

ST. JOHN AMBULANCE

Associate Software Engineer

Bangalore, India

June 2022 – February 2023

- Developed backend scheduling modules using **Java Spring Boot**, **.NET Core**, and **PostgreSQL**, automating **500+** monthly first-aid requests and reducing manual effort by **70%**, saving the organization over **\$14,000**
- Designed and implemented a secure, responsive volunteer portal with **React.js**, **Node.js**, and **RESTful APIs**, boosting volunteer registration rates by **40%** and enhancing **user engagement**
- Integrated third-party emergency **response APIs** and built real-time notification systems using **C#**, **Node.js**, **WebSockets**, and **Azure Event Grid**, reducing incident response times by **30%** and ensuring scalable, reliable communication

RIVERSAND TECHNOLOGIES

Full Stack Developer

Bangalore, India

July 2021 – October 2021

- Designed and delivered modular backend microservices for Syndigo's cloud-native **Master Data Management** (MDM) platform using **Java** and **Python**, leveraging **OOP** and proven design patterns to handle complex product and customer data at scale
- Built and optimized real-time event pipelines with **Apache Kafka** and **Storm**, enabling reliable processing of key **MDM/PIM** events such as product updates and supplier onboarding — reducing data lag by **30%** and improving system resilience
- Implemented robust **CI/CD automation** using **GitLab CI** and **Docker**, streamlining the build and deployment lifecycle and ensuring faster, fault-tolerant releases across multi-environment cloud infrastructure

PROJECTS

Time-Series Forecasting and Semantic Search Platform Deployed on Google Cloud

Chicago, Illinois, USA

- Designed and deployed a cloud-native time-series forecasting and semantic search platform on **Google Cloud Platform** (GCP) using containerized **Flask APIs**, a **React frontend**, and integrated **ElasticSearch**, **TensorFlow LSTM**, and **Prophet** for real-time GitHub issue analytics and semantic query resolution

Full Stack Electronic Medical Records Platform

Chicago, Illinois, USA

- Developed Engineered a secure, scalable Electronic Medical Records system using **Java 11**, **Spring Boot**, **Hibernate**, and **MySQL**, with a layered architecture (Controller–Service–Repository), full RESTful API support, and planned integration of **JWT authentication**, **Docker**, and **Swagger** for future extensibility

Full DevSecOps Automation with GenAI-Driven Virtual Teams

Chicago, Illinois, USA

- Architected and implemented a fully automated **DevSecOps** pipeline using the Waterfall model, integrating **CI/CD**, **SAST**, **DAST**, and **Infrastructure as Code (IaC)** tools, then transitioned to an agile Scrum workflow enhanced by **GenAI-driven virtual teams** with **AutoGen** and **LangChain**, driving adaptive task allocation, sprint planning, and intelligent workflow automation to significantly boost deployment velocity and pipeline security
